

Heatmap showing the expression of 37 GP genes across 18 tissues. The color scale ranges from blue (low expression) to red (high expression). The genes are listed on the right, and the tissues are listed on the bottom. The heatmap shows that GP9, GP58, GP80, GP41, GP29, GP62, GP3, GP100, GP1, GP35, GP170, GP174, GP8, GP93, GP177, GP6, GP23, GP72, GP25, GP63, GP22, GP43, GP32, GP11, GP26, GP4, GP30, GP171, GP49, GP166, GP51, and GP37 are expressed in various tissues, with GP9, GP58, GP80, GP41, GP29, GP62, GP3, GP100, GP1, GP35, GP170, GP174, GP8, GP93, GP177, GP6, GP23, GP72, GP25, GP63, GP22, GP43, GP32, GP11, GP26, GP4, GP30, GP171, GP49, GP166, GP51, and GP37 showing high expression in blood, spleen, LN, bone marrow, lung, liver, peritoneal cavity, colon epi, small intestine epi, colon LP, small intestine LP, skin, mammary gland, uterus, placenta, submandibular gland, kidney, and CNS.
